

ISTQB Advanced Test Management (CTAL-TM) (4 days)

6 h / day

5-10 persons

FIN / ENG

ENG

The ISTQB® Advanced Level Test Management (CTAL-TM) certification provides the knowledge and competencies to take responsibility for managing all the testing activities across the software development lifecycle. It covers everything from how to design a suitable test approach for the project based on the organizational test strategy to building a test team or testing competencies to complete the necessary testing.

This course is based on the ISTQB CTAL-TM syllabus v 3.0.

For more detailed description of the course contents, please visit <https://www.istqb.org/certifications/certified-tester-advanced-level-test-management-ctal-tm-v3-0/>

- **Target group**

- This course is aimed at anyone involved in the management of software testing, such as testers, test consultants, test managers, user acceptance testers, scrum masters, project managers or product owners. This course is also appropriate for anyone who wants an advanced understanding of software testing such as project managers, quality managers, software development managers, business analysts, IT directors and management consultants.

- **Prerequisites**

- To gain this certification, candidates must hold the Certified Tester Foundation Level certificate and have sufficient practical experience. As the course material and the certification exam are in English, the participants are expected to have good command of English language.
