

ISTQB Test Automation Engineer (3 days)

6 h / day

5-10 persons

FIN / ENG

ENG

The Certified Tester Advanced Level Test Automation Engineering (CTAL-TAE) qualification is aimed at anyone involved in software testing and test automation. This includes people in roles such as testers, test analysts, test automation engineers, test consultants, test architects, test managers, and software developers. This qualification is also appropriate for anyone who wants a basic understanding of test automation, such as project managers, quality managers, software development managers, business analysts, IT directors and management consultants.

This course is based on the ISTQB TAE syllabus v 2.0.

- **Target group**

- The Test Automation Engineering syllabus is targeted to the test engineer looking to implement or improve on test automation. It defines methods and practices that can support a sustainable solution.

- **Prerequisites**

- To gain this certification, candidates must hold the Certified Tester Foundation Level certificate and have sufficient practical experience. As the course material and the certification exam are in English, the participants are expected to have good command of English language.

Contents:

- Introduction and Objectives for Test Automation
- Preparing for Test Automation
- Test Automation Architecture
- Implementing Test Automation
- Implementing and Deployment Strategies for Test Automation
- Test Automation Reporting and Metrics
- Verifying the Test Automation Solution
- Continuous Improvement
