

Security Testing (1 day)

6 h / day

5-10 persons

FIN / ENG

FIN / ENG

Security testing course introduces different areas of security testing. Each area is first explained in theory and then it is adapted to the participants' real project.

- **Target group**

- For software developers, architects, team leaders, project managers and others who are involved in software testing daily.

Contents:

- **Theory:**

- Dynamic and Static Application Security Testing (DAST / SAST)
- Manual and automated testing, using OWASP Zed Attack Proxy (ZED) and other tools as an example
- Things to test and testing tactics
- Tools and principles for evaluating the results

- **Practice:**

- Hands-on exercises
